

## Drilling Equipment Inspection Services

ESPRAT specialises in inspection, maintenance and cleaning of all OCTG components including drill pipe, tubing & casing, BHA and all completions equipment. Our services include:

- Specialised Drill Pipe & Tubular Inspection
- BHA & Specialty Drilling Tools Inspection
- Connection Field Repair & Refacing Services
- OCTG Inspection Consulting & Verification Services
- Drill Pipe & Tubular Cleaning Services

Our experienced inspectors are highly trained and qualified and draw on their knowledge and understanding to ensure assessments are conducted to the highest possible standard. Our inspection personnel work as a self-contained team on board any drilling unit / vessel or land based site ensuring minimal disruption to day-to-day operations.

## Drilling Equipment Inspection Services

ESPRAT's mobile inspection units allow for all BHA components, specialty tools and pipe ranging from 2-3/8" to 6-5/8" OD to be inspected at any location in Australia, at short notice to DS1, API, NS-2 or customer / manufacturer's specifications.

### Connection Field Repair & Refacing Services

ESPRAT carries a range of refacing units to allow for quick and cost-effective repairs in the field.

### OCTG Inspection Consulting & Verification Services

ESPRAT can provide highly experienced OCTG professionals for third party verification services to ensure compliance to industry and customer standards.

## Mobile Tubular Cleaning Services

ESPRAT is able to offer a fully mobile tubular cleaning service which allows for full preparation of drill pipe for inspection anywhere in Australia.

### Mobile Tubular Cleaning

ESPRAT's unique dry tubular cleaning units are capable of ID and OD cleaning, are fully mobile and can be utilised at any drilling site in Australia. The units are powered by the supplied diesel generator and end results are comparable with fixed cleaning machines, with cleaning times significantly reduced from traditional manual methods.

### High Pressure Water Jetting

ESPRAT's high pressure, skid-mounted, diesel powered water jetters can be used in conjunction with our mobile tubular cleaning units to provide a full tubular cleaning solution anywhere in Australia. These units complete with a range of nozzles allowing tubulars from 2-3/8" to 6-5/8" to be cleaned quickly and easily.

### Operators

All cleaning units are supplied with trained and competent operators. Where required multi-skilled personnel can be supplied to offer both the cleaning services and drilling tools inspection service.
